

Pre-HPC Closure of the Gauge-Covariant q-D-H Portal

Angus Muffatti

Archive reconstruction from the surviving project ledger. Historical sandbox binaries were ephemeral;
see RECOVERY_PROVENANCE.md.

Executive result

The pre-HPC programme is complete as a declared executable truncation. Pointwise Born/LPM/hard/HTL/overlap matching, factorisation-scale tests, finite transverse vertices, declared ghost/matter-ghost STI closure, a conserving $H^\dagger H$ ladder and an executable resource specification are supplied. Pilot and production resource tiers use 8 and 128 GPUs. Acceptance requires Ward/ST, Nielsen, KMS, conservation, q^* cancellation and singlet positivity.
